(Name and telephone number, including area code, of the person to contact in connection with this report)

Check the appropriate box to indicate the rule pursuant to which this form is being filed and provide the period to which the information in this form applies:

Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2017.

ITEM 1.01 – Conflicts Minerals Disclosure

This Form SD of Electronics For Imaging, Inc. (the “Company”) is filed pursuant to Rule 13p-1 under the Securities Exchange Act of 1934 (the “Rule”) for the reporting period of January 1, 2017 to December 31, 2017.

The Company has determined that certain Conflict Minerals (as defined in paragraph (d)(3) of Item 1.01) are necessary to the functionality or production of certain products manufactured by the Company. The Company’s reasonable country of origin inquiry and due diligence efforts are described further in the Conflict Minerals Report for the year ended December 31, 2017 that is filed herewith as Exhibit 1.01 and incorporated herein by reference.

A copy of the Company’s Conflict Minerals Report for the year ended December 31, 2017 is publicly available at the Investor Relations section of our website at www.efi.com as well as the SEC’s EDGAR database at www.sec.gov. The content of any website referred to in this Form SD is included for general information only and is not incorporated by reference in this Form SD.

ITEM 1.02 – Exhibit

The Conflict Minerals Report required by Item 1.01 is filed as Exhibit 1.01 of this Report on Form SD.

ITEM 2.01 – Exhibits

(d) Exhibits

<u>Exhibit No.</u>	<u>Description</u>
1.01	Electronics For Imaging, Inc. Conflict Minerals Report for the Year Ended December 31, 2017

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned duly authorized.

Date: May 31, 2018

ELECTRONICS FOR IMAGING, INC.

By: /s/ Alex Grab

Alex Grab

Vice President & General Counsel

Electronics For Imaging, Inc.
Conflict Minerals Report
For the Year Ended December 31, 2017

This Conflict Minerals Report of Electronics For Imaging, Inc. (the “Company”) for the year ended December 31, 2017 is presented pursuant to Rule 13p-1 under the Securities Exchange Act of 1934 (the “Rule”). The Rule imposes certain reporting obligations when a registrant manufactures or contracts to manufacture products for which Conflict Minerals (as defined below) are necessary to the functionality or production of such products. Conflict Minerals are defined as cassiterite, columbite-tantalite (coltan), gold, wolframite, or their derivatives, which are limited to tin, tantalum, and tungsten.

The Company and Its Products

Unless the context otherwise requires, the “Company,” “EFI,” “we,” “our, and “us” refer to Electronics For Imaging, Inc. and its consolidated subsidiaries.

We are a world leader in customer-centric digital printing innovation focused on the transformation of the printing, packaging, ceramic tile decoration, and textile industries from the use of traditional analog based printing to digital on-demand printing.

Our products include industrial super-wide and wide format display graphics, corrugated packaging and display, textile, and ceramic tile decoration digital inkjet printers that utilize our digital ink, industrial digital inkjet printer parts, and professional services; print production workflow, web-to-print, cross-media marketing, fashion design, and business process automation solutions; and color printing digital front ends (“DFEs”) creating an on-demand digital printing ecosystem. Our ink includes digital ultra-violet curable, light emitting diode curable, ceramic, water-based, thermoforming, and specialty ink, as well as a variety of textile ink including dye sublimation, pigmented, reactive dye, acid dye, pure disperse dye, water-based dispersed printing ink, and coatings. Our award-winning business process automation solutions are integrated from creation to print and are vertically integrated with our industrial digital inkjet printers and products produced by the leading production digital color page printer manufacturers that are driven by our Fiery DFEs.

Our product portfolio includes industrial super-wide and wide format digital inkjet products (“Industrial Inkjet”) including VUTEk display graphics super-wide and wide format, Nozomi corrugated packaging, Reggiani textile, Cretaprint ceramic tile decoration and building material industrial digital inkjet printers and ink; print production workflow, web-to-print, cross-media marketing, Optitex textile two-dimensional and three-dimensional computer aided fashion design applications, and business process automation software (“Productivity Software”), which provides corporate printing, packaging, corrugated packaging, publishing, and mailing and fulfillment solutions for the printing and packaging industry; Fiery DFEs (“Fiery”), including the FreeFlow Print Server DFE, and Generation Digital print and fabric design software. Our integrated solutions and award-winning technologies are designed to automate print and business processes, streamline workflow, provide profitable value-added services, and produce accurate digital output.

We have determined that gold, tantalum and tin are necessary to the functionality or production of some of our manufactured products in our Industrial Inkjet, Productivity Software and Fiery portfolios.

We have adopted a policy relating to Conflict Minerals, incorporating the standards set forth in the Second Edition of the Organisation for Economic Co-operation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas and related supplements for gold, tin, tantalum and tungsten (“OECD Framework”). The policy states that EFI will not knowingly purchase raw materials, subassemblies, or supplies that are known to contain Conflict Minerals that directly or indirectly finance or benefit armed groups in any of the Covered Countries (as defined below). Our policy further states that we will exercise due diligence with relevant suppliers consistent with the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas and encourage our suppliers to do likewise with their suppliers.

Our conflict minerals policy is posted at the Investor Relations section of our website at www.efi.com.

Reasonable Country of Origin Inquiry and Due Diligence Process

In accordance with the Rule, the Company undertook a reasonable country of origin inquiry (“RCOI”) regarding the Conflict Minerals in its manufactured products. This RCOI was reasonably designed to determine whether any of the Conflict Minerals originated in the Democratic Republic of the Congo, the Republic of Congo, the Central African Republic, South Sudan, Uganda, Rwanda, Burundi, Tanzania, Zambia, or Angola (collectively, the “Covered Countries”), and whether any of the Conflict Minerals may be from recycled or scrap sources (as defined by paragraph (d)(6) of Item 1.01 of Form SD). The Company also exercised due diligence on the source and chain of custody of the Conflict Minerals.

EFI’s supply chain with respect to our products is complex. There are many third parties in the supply chain between the ultimate manufacture of our products and the original sources of Conflict Minerals because EFI does not purchase Conflict Minerals directly from mines, smelters or refiners. We rely on our direct suppliers to provide information on the origin of the Conflict Minerals contained in components and materials supplied to us including sources of Conflict Minerals that are supplied to them from lower tier suppliers.

We designed our due diligence measures to be in conformity, in all material respects, with the framework in the OECD Framework.

Our RCOI and due diligence efforts included conducting a supply-chain survey with direct suppliers using the Electronics Industry Citizenship Coalition (“EICC”)/Global e-Sustainability Initiative (“GeSI”) Conflict Minerals Reporting Template (“CMRT”) to identify the smelters and refiners that contribute Conflict Minerals to our suppliers and follow up contact with those that did not respond to our initial inquiries and those that provided incomplete responses. We also performed a review of the smelter information provided by those suppliers that included such information in the collected surveys, determining whether the identified smelters are “known” smelters or have been identified as “conflict free” by the Responsible Minerals Assurance Process (“RMAP”) formerly the Conflict-Free Smelter Program EICC/GeSI Conflict Free Smelter Program for Conflict Minerals.

For the year ended December 31, 2017, we contacted 64 Tier 1 suppliers, which accounted for approximately 95% of our 2017 production supply spend on products that could contain gold, tin, tantalum or tungsten. We conducted a survey of these suppliers to determine whether gold, tin, tantalum or tungsten in components contained in our products may have originated in the Covered Countries or if they were from recycled or scrap sources. We also issued subsequent reminders for supplier survey non-responses. As a result of our efforts, we received responses from most of the suppliers surveyed and the majority of supplier survey responses listed the smelters/refiners used in their supply chain.

The responses contained varying degrees of information regarding the names and locations of smelters/refiners, which process necessary Conflict Minerals used in our suppliers’ products, which are ultimately incorporated into our products. We reviewed the responses and made further inquiries of our suppliers as necessary

Many of the responses received provided smelter or refinery information at a company or divisional level or were unable to specify the smelters or refiners used for products supplied to EFI. As a result, EFI is unable to determine whether any of the Conflict Minerals reported by our suppliers were contained in components or parts supplied to us or to validate that any of these smelters or refineries are actually in EFI’s supply chain. Through our participation in the Responsible Minerals Initiative (“RMI”), we continue to support independent third party audits through the RMI or other third party certification schemes.

Our due diligence process includes participation in RMI and following the OECD Framework. We requested that our suppliers complete the CMRT survey in order to obtain information about Conflict Minerals smelters or refiners in our supply chain. We have determined that these actions represent the most reasonable effort we can make to determine the mines or locations of origin of the Conflict Minerals in our supply chain.

Although the majority of survey responses provided smelter and refiner data, some responses did not completely list all the smelters or refiners used in their supply chain. We analyzed and compared the Conflict Minerals smelter and refiner data we received against information obtained from the RMI database. For the calendar year 2017, our due diligence identified 307 smelters and refiners as potential sources of Conflict Minerals that were reported to be in our supply chain.

In order to provide compliance status, we completed further analysis of the 307 smelters and refiners, of which 260 have been certified as conflict-free compliant by the RMI approved program or are known to be legitimate smelters that the RMI outreach program categorizes as active in the process of obtaining an audit, or communicating with RMI but have yet to be certified. The remaining 47 are smelters or refiners that have been allocated a Smelter Identification CID number but are not currently active in the RMI program. For 2017, our due diligence identified the information set forth in the following table:

Metal	Number of Refiners/Smelters	Number of RMAP Certified or Active Refiners/Smelters
Gold	142	107
Tantalum	40	40
Tin	80	72
Tungsten	45	41
Total	307	260

RMAP compliance results are as of May 29, 2017. The data above was obtained from the non-public (member only access) RMI Data Exchange Forum as of May 29, 2018.

Based on the information provided by our suppliers, we believe that the facilities that may have been used to process the minerals in our products include the smelters listed in Appendix I. Based on our due diligence efforts, we do not have sufficient information to conclusively determine the countries of origin of the Conflict Minerals in our products or whether the minerals in our products are from recycled or scrap sources. However, based on the information provided by our suppliers, as well as from the RMI and other sources, we believe that the countries of origin of the Conflict Minerals contained in our products may include the countries listed in Appendix II below as well as recycled and scrap sources.

The Company's efforts to determine the mine(s) or location of origin with the greatest possible specificity included the use of the due diligence measures described above.

Risk Mitigation/Future Due Diligence Measures

During the year ended December 31, 2017, the Company undertook the following steps to improve the due diligence conducted to further mitigate the risk that the necessary Conflict Minerals in our products could benefit armed groups in the Covered Countries, including:

- Maintained a cross-functional team to review and evaluate data gathering in connection with determining the source of the necessary Conflict Minerals in our products and elevated non-responsive issues as necessary;

-
- Provided a telephone hot-line and e-mail address for supplier communication relating to Conflict Minerals; and
 - Renewed our membership in RMI in order to enhance our due diligence efforts.
 - Encouraged our direct suppliers to purchase materials from smelters that are listed on the RMAP Compliant Smelter Lists and have been certified as conflict-free by an independent auditor through the RMAP;
 - Encouraged our suppliers to encourage smelters in their supply chain to undergo the audit process to be certified as conflict-free through an industry program, such as the RMAP; and
 - Continued implementing down-stream reporting obligations in our future contracts with suppliers.
